

The Tools Guide

Thirty free tools and a course for the people who run the work: what they are for, how to use them, and why they look the way they do.

Stiven Janaqi

stivencatalyst.com

ABOUT THIS GUIDE

Thirty tools, four planets, one idea

Stiven Catalyst has thirty free tools and a course for the people who run the work: shift leads, area managers, process managers, and anyone carrying their experience into the next role.

This guide explains how the tools are organised, why the site looks the way it does, and how to use each tool, step by step. You do not need to read it in order: find your planet and start there.

Free

Every tool is free to use.

No account

You open a tool and start. There is nothing to sign up for.

On your device

Your work is kept in your browser, not on a server. No cookies, no analytics.

> One exception, stated in the tool: when you type a company's website in the CV Builder, that address goes to Google's icon service to fetch the logo.

START HERE

Which planet is yours?

The tools are grouped by the work you do, not by method. Start with the planet that matches your day.

You run the floor for one shift.
Pulse · Shift Lead Page 10

You lead an area and read its numbers week by week.
Zenith · Area Manager Page 22

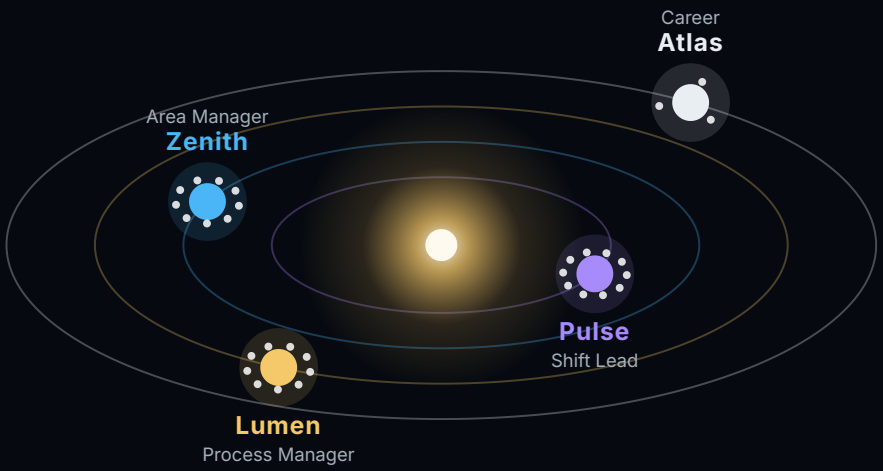

You look after the whole system and the way it changes.
Lumen · Process Manager Page 33

You are carrying your experience into your next role.
Atlas · Career Page 44

Not sure? Start with the problem in front of you: the contents list every tool by name.

THE IDEA, 1

Why a solar system

On the homepage the tools are a small solar system. At the centre is the light, the Catalyst bulb. In the brand it stands for clarity: the moment a complex problem becomes understandable.

The planets are roles. Each orbit widens as the role's view does: Pulse, the Shift Lead, sees one shift; Zenith, the Area Manager, one area week by week; Lumen, the Process Manager, the whole system; Atlas is the career that every role carries.

The moons are the tools, one for each tool or course. Tap a planet and its tools open; tap a moon and you are in the tool. As in a real solar system, the planets closest to the light move fastest.

THE IDEA, 2

Four families, four colours

Each role is a family with its own colour: Pulse violet, Zenith blue, Lumen gold, Atlas silver. None of them is red or green, so a family never reads as an error or a success: on this site, red and green only report a result inside a tool.

On a family's pages its colour takes the place of the site's blue, so a page still has a single accent.

Pulse
Cracks beating inside a heartbeat ring: the pulse of one shift.

Zenith
A contour map under a radar: an area seen from above, week by week.

Lumen
It shines by itself, inside a ring of dust in five parts: the five steps of DMAIC.

Atlas
A globe with the path of a career drawn as a constellation.

THE IDEA, 3

Small tools that work together

The idea behind the tools is simple: tools made from the work on the floor, that need nothing but a browser. No installation, no account, no server that keeps your data.

What makes them more than separate calculators is that they pass work to each other, inside your browser:

- The Damage, Incomplete and Delay logs feed Shift Pulse and the Daily Board, and the Shift Handover takes their numbers with “Fill in from the logs”.
- Any log result goes on with one button: “Take it to 5 Whys”, “Open in Pareto 80/20”, “Open as control chart” or “Add to actions”.
- 5 Whys sends its countermeasure to the Action Tracker or puts it on the Shift Handover.
- The CX Control Tower and the Fishbone send their causes to Pareto 80/20; the A3 Report takes the Pareto result and the 5 Whys worksheet.
- The Cover Letter takes your details from the CV Builder or the ATS CV.

And on each role page, a coaching workspace turns the tools into a practice: a project with a goal, a measurement and a review date. More on the last pages.

THE IDEA, 4

One list, one workplace

Sixteen of the tools were made as one daily system for the floor, from the huddle to the standard. Three things hold them together, all in your browser:

- One list of actions. A countermeasure from 5 Whys, a finding of the 5S Audit, a signal of Process Lab: each becomes an action in the Action Tracker, with an owner, a due date, a status and a way to check it. A tool hands it over once, never twice.
- One workplace profile. The site, its shifts, its areas with their owners, its teams and the targets are typed once, on the Daily Board, in the 5S Audit, the Gemba Walk or the Skills Matrix, and every tool that needs them offers them. Without a profile, each tool works with what you type into it.
- One kind of chart. Point at or tap a chart to read its values, and download it as SVG or PNG in print colours.

A day with them: the logs and the Safety Cross through the shift, the Daily Board at the huddle, a Gemba Walk or a 5S Audit on the floor, and once a week ten minutes with the Action Tracker: overdue first, then this week, then what was verified.

> The list of actions and the workplace profile are the same in every language of the site; everything else is kept per language.

BEFORE YOU START

Your work stays with you

Every tool keeps your work only in the browser you use. It is not sent anywhere, which also means it is not on your phone if you worked on your laptop.

To keep everything, or to move it to another device, use “Save all my work” at the end of any tool page: one file with the work of every tool. “Open a saved file” brings it back and replaces only the tools in that file.

- Most tools print or save as PDF, and the logs download as CSV and as Excel.
- Each tool keeps its work separately for each language of the site, except the list of actions and the workplace profile.
- A tool you have opened once opens again without a connection, and the site can be installed as an app.
- If the browser cannot save, the tool says so: download the CSV or copy the summary to keep your work.
- Clearing the browser's data clears your work too. Save a file first.

FAMILY

Pulse

Shift Lead

ONE SHIFT

You run the floor for one shift: people, damage, incomplete orders, delays, and a clean handover at the end.

Ten tools for one shift: log what goes wrong where it happens, keep the floor safe and in order, run the huddle, see the shift in one picture, and hand it over cleanly, with every action on one list.

ITS TOOLS

Shift Pulse	12	Damage Control	13
Incomplete Control	14	Delay Analyzer	15
Night Audit Log	16	Shift Handover	17
Action Tracker	18	Daily Board	19
5S Audit	20	Safety Cross	21

A ROUTINE

Where each tool fits into the work of this role, step by step.	11

PULSE · SHIFT LEAD

A routine

Where each tool fits into the work of this role, step by step.

Start of shift	Read the last handover before the briefing, not after the first problem. · Shift Handover
During the shift	Log each damaged unit where it happens, with its stage and cause. · Damage Control
During the shift	Log every order that leaves without all its items or parcels. · Incomplete Control
Every night	In a hotel, log every exception the night audit finds, with its stage and cause, before the audit closes. · Night Audit Log
End of shift	Before you write the handover, look at the whole shift in one picture. · Shift Pulse
End of shift	Hand over open issues with an owner and a time, not a story. · Shift Handover
Every week	See whether late routes started at the dock or on the road. · Delay Analyzer
When a problem returns	Ask why until you reach something you can change. · 5 Whys
Every week	Read the actions overdue first, then this week's, then what was verified. Ten minutes, the list is the agenda. · Action Tracker
Every morning	Open the board at the huddle, read the five letters and the agenda, and give every red day an action with an owner and a date. · Daily Board
Every week	Walk the same areas on the same day, score what you see, and give every finding at 2 or below an owner before you leave the floor. · 5S Audit
Start of shift	Log what happened yesterday, read the talk of the day at the briefing and ask who saw a near miss. · Safety Cross

PULSE | DASHBOARD | 1 MIN

Shift Pulse

Damage, incomplete orders, late routes, safety, OEE, open actions and the handover in one picture, by day or week. Trend charts, flags for what is off, and a summary to copy or print.

> *At the end of a shift or a week, when you want the whole picture before you write the handover.*

HOW TO USE IT

1. Choose a period: 7, 14 or 30 days, or 8 or 12 weeks.
2. Choose the shift.
3. Read the cards and the flags.
4. Open the trend chart of any number.

WHAT YOU GET

One look at what the Damage, Incomplete, Delay and Handover logs in this browser hold, and the Safety Cross, OEE, the open actions and the latest 5S audit once they have data: cards and a trend for each number, flagged “Above usual” only beyond the control-chart limit of its usual level, to copy, print or save as PDF.

YOUR DATA

It keeps only your settings. It reads the other tools and changes nothing in them.

Open it stivencatalyst.com/tools/shift-pulse/

PULSE | WAREHOUSE | ONGOING

Damage Control

Log damaged units by stage and cause. See the damage rate, DPMO and sigma level, the few causes behind most of it, and where to start.

> *Every time a unit is damaged, at the stage where it happens.*

HOW TO USE IT

1. Log each damaged unit: date, stage, cause and units, with a cost and a note if you have them. Rows from Excel can be pasted with “Import rows”.
2. Set the period: the units handled and your target.
3. Review the log. To try the tool first, load an example week.
4. Walk the “Floor check”.

WHAT YOU GET

Damage rate, DPMO and sigma level, the few causes behind most of the damage, the stages where it happens, a trend, and where to start. Download it as CSV or Excel, or take it on to 5 Whys, Pareto 80/20, a control chart or the Action Tracker.

YOUR DATA

The log stays in this browser. Nothing is sent or uploaded.

Open it stivencatalyst.com/tools/damage-control/

PULSE WAREHOUSE ONGOING

Incomplete Control

Log orders that left without every item or parcel. See the incomplete rate, DPMO and sigma level, the causes behind most misses, and where they start.

> *Every time an order leaves without all its items or parcels.*

HOW TO USE IT

1. Log each incomplete order by date, stage and cause, or import rows.
2. Set the period: the orders handled and your target.
3. Review the log.
4. Walk the “Floor check”.

WHAT YOU GET

Incomplete rate and complete orders, DPMO and sigma level, the causes behind most of the errors and the stages where they start, with the same exports and next steps as Damage Control.

YOUR DATA

The log stays in this browser. Nothing is sent or uploaded.

Open it stivencatalyst.com/tools/incomplete-control/

PULSE WAREHOUSE ONGOING

Delay Analyzer

Log planned and actual route times. See the on-time rate, how much delay starts at the dock and how much on the road, and the reasons and hours behind it.

> *When routes arrive late and you need to know whether the delay began at the dock or on the road.*

HOW TO USE IT

1. Log a route: date, shift, route, planned and actual departure, planned and actual arrival, and the reason if it was late. Rows can be imported.
2. Set the grace minutes for departure and arrival, and your on-time target.
3. Review the log.
4. Walk the “Floor check”.

WHAT YOU GET

On-time rate, every late minute split into dock and road, the reasons, the departure hours and shifts behind the delays, and a trend, with the same exports and next steps as Damage Control.

YOUR DATA

The log stays in this browser. Nothing is sent or uploaded.

Open it stivencatalyst.com/tools/delay-analyzer/

PULSE HOTEL ONGOING

Night Audit Log

Log the no-shows, declined cards, posting errors and open balances the night audit finds. See the exception rate, DPMO and sigma level, the causes behind most of them, and where in the stay they start.

> *Every night, for each no-show, declined card, posting error or open balance the audit finds.*

HOW TO USE IT

1. Log each exception: date, shift, the stage of the stay where it was found, its type and cause, and the reservations affected, with a cost and a note if you have them. Rows from the PMS or Excel can be pasted with “Import rows”.
2. Set the period: the reservations handled and your target.
3. Review the log. To try the tool first, load an example week.
4. Walk the “Floor check” of the audit standard.

WHAT YOU GET

Exception rate and clean reservations, DPMO and sigma level, the few causes behind most exceptions and the stage of the stay where they start, with the same exports and next steps as Damage Control. The hotel handover takes its no-shows from here.

YOUR DATA

The log stays in this browser. Nothing is sent or uploaded.

Open it stivencatalyst.com/tools/night-audit/

PULSE | CHECKLIST | 5 MIN

Shift Handover

Numbers, open issues with an owner and a time, heads-up and safety in one handover. Open issues carry over to the next shift by themselves.

> *At the end of every shift. Most problems are not lost on the shift; they are lost between shifts.*

HOW TO USE IT

1. Choose a template: warehouse, hotel front office or delivery station. Fill in date, shift, area and both names.
2. Add the numbers. “Fill in from the logs” takes them from Damage, Incomplete and Delay; the hotel template takes its no-shows from the Night Audit Log.
3. List the open issues, each with an owner and a time. Add heads-ups, safety and people.
4. Run the handover check.

WHAT YOU GET

A “Ready to hand over” view to copy, print or save as PDF, and send through your own channel. “Close shift, start the next” carries the open issues forward and counts how often they were carried; an open issue goes on to 5 Whys or the Action Tracker. Earlier handovers stay in a history.

YOUR DATA

The handover stays in this browser. Nothing is sent.

Open it stivencatalyst.com/tools/shift-handover/

PULSE ACTIONS WEEKLY

Action Tracker

One list for every countermeasure, finding and signal from the other tools: owner, due date, status and how it is verified. Overdue first, a weekly review in ten minutes, calendar and Excel export.

> *Whenever a tool gives you something to do, and once a week to close the loop: one list for every countermeasure, finding and signal.*

HOW TO USE IT

1. Write the action as a verb, with an owner, a due date and how you will know it worked. Or send it from another tool: it arrives with its source.
2. Move it from open to in progress, done and verified. Done says the change was made; verified says the number moved and stayed.
3. Filter by status, by owner or by the tool it came from.
4. Hold the weekly review: overdue first, then due this week, then what was verified. “Copy the review” for the meeting.

WHAT YOU GET

The week in actions: what is overdue and who carries it, the actions closed per week, the due dates on a month calendar, and the review to copy or print. The list downloads as CSV, as Excel or as a “Calendar file (.ics)” with every open due date.

YOUR DATA

The list stays in this browser, the same in every language. An action sent from a tool is added once, never twice.

Open it stivencatalyst.com/tools/action-tracker/

PULSE | DASHBOARD | 10 MIN

Daily Board

Safety, Quality, Delivery, Cost and People as five month calendars of green, amber and red days, filled from your logs. Open actions, carried handover issues and a ten-minute huddle agenda to read out or print.

> *At the start of every shift, for a huddle of ten minutes, standing.*

HOW TO USE IT

1. Fill in the “Workplace profile” once: the site, its shifts, its areas with their owners, and the targets that colour the board.
2. Let the logs in this browser colour Safety, Quality and Delivery: the Safety Cross, the 5S Audit, Damage Control, Incomplete Control, the Night Audit Log and the Delay Analyzer.
3. Mark Cost and People by hand with “Add to the board”. An entry by hand overrules the logs for that day.
4. Read the “Huddle agenda” out: yesterday's board, the actions overdue or due today, the carried handover issues and the safety message of the day.

WHAT YOU GET

Safety, Quality, Delivery, Cost and People as five month calendars of green, amber and red days, the red days per letter against last month, and the agenda to copy or print. A red day goes on with “Add to actions” or “Take it to 5 Whys”.

YOUR DATA

Your entries by hand stay in this browser and download as CSV or Excel. The board reads the other logs and changes nothing in them.

Open it stivencatalyst.com/tools/daily-board/

PULSE LEAN 10 MIN

5S Audit

Walk one area and score each S from 0 to 4, in 5S, 6S or 8S, with checklists for warehouse, hotel and delivery station. A radar against the last walk, the trend and a league table by area, findings straight into actions and a red tag register.

> *On a fixed weekday, in the same areas and in the same order, to see whether order on the floor holds.*

HOW TO USE IT

1. Choose 5S, 6S or 8S, a checklist for warehouse, hotel or delivery station, the area and the date.
2. Walk the area and score each question as you see it now, from 0, nothing in place, to 4, the full standard. Note what you see at 2 or below.
3. “Save audit”, then “Add findings to actions” to give each finding an owner in the Action Tracker.
4. Tag what may not belong there in the “Red tag register”, with a reason, a decision and an owner.

WHAT YOU GET

A radar of each S against the last walk of the area, the trend and a league table of the areas, the weakest questions, and the open red tags by age. “Print scorecard”, or download the audits and the red tags as CSV or Excel.

YOUR DATA

The audits and the red tags stay in this browser. Nothing is sent or uploaded.

Open it stivencatalyst.com/tools/five-s-audit/

PULSE SAFETY ONGOING

Safety Cross

Every accident, near miss and unsafe condition on the green cross of the month, with days since the last accident, LTIFR, TRIR and the Bird pyramid. The cause to tackle first, open actions and a talk for today's briefing.

> *The day it happens: every accident, first aid, near miss, unsafe condition or act, and the positive observations too.*

HOW TO USE IT

1. Log each event: date, shift, type, area, what happened, the cause and its severity as the potential, not the outcome, with an action and an owner. Rows can be imported.
2. Enter the hours worked in the month for LTIFR and TRIR and, if you like, a target of near-miss reports and a goal of days without an accident.
3. Read the cross of the month, then the cause to tackle first.
4. Give the talk of the day at the briefing, then “Mark as held”.

WHAT YOU GET

The month as a green cross with a red or amber day for each event, the days since the last accident, LTIFR, TRIR, the Bird pyramid and where the events happen. “Send open actions to the Action Tracker”, or take the top cause to 5 Whys or Pareto 80/20.

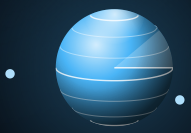

YOUR DATA

The log stays in this browser and downloads as CSV or Excel. Nothing is sent or uploaded.

Open it stivencatalyst.com/tools/safety-cross/

FAMILY

Zenith

Area Manager

ONE AREA, WEEK BY WEEK

You lead the shift leads. You read an area's numbers week by week and decide where the next hour of attention goes.

Nine tools for one area: read the week, find where a red number really comes from, start with the causes that matter most, put a problem on one sheet, and grow the team's ideas and skills on the floor.

ITS TOOLS

- Last-Mile CX Control Tower 24
- KPI Diagnostic 25
- Pareto 80/20 26
- A3 Report 27
- Kaizen Board 28
- Skills Matrix 29
- OEE 30
- Hotel KPIs 31
- Gemba Walk 32

A ROUTINE

- Where each tool fits into the work of this role, step by step. 23

ZENITH · AREA MANAGER

A routine

Where each tool fits into the work of this role, step by step.

Every morning	Read yesterday in one view: on time, undamaged, complete and complaints. · Last-Mile CX Control Tower
When a KPI turns red	Find out whether it is clarity, skill, capacity, process or ownership before you push. · KPI Diagnostic
Every week	Sort the week's losses and start with the few causes behind most of them. · Pareto 80/20
Every week	Read the logs of your shifts week by week: rates, the trend and what is still open. · Shift Pulse
Every week	Check with your shift leads where route delays begin. · Delay Analyzer
Every month	Tell a real change from a normal bad day before you react. · Sigma & Control Chart
When a problem returns	Write the problem on one A3 before you fix it: the number, the root cause, one owner per countermeasure, and the date you will check. · A3 Report
Every week	Answer every new idea within the week, move each card one honest step, and name the idea of the month in front of the team. · Kaizen Board
Every month	Walk the matrix with each team lead, update the levels you saw on the floor, take a snapshot and give every single point of failure a trainee and a date. · Skills Matrix
End of shift	Log the shift of each machine with its stops by reason, then attack the biggest of the six losses with an owner and a date. · OEE
Every morning	Paste last night's figures from the night audit, read the morning report at the meeting and act on the KPI the tool puts first. · Hotel KPIs
During the shift	Walk your layer's questions where the work is done, answer each with yes or no against the standard, and give every no you cannot fix on the spot an owner before you leave the floor. · Gemba Walk

ZENITH | LAST MILE | WEEKLY

Last-Mile CX Control Tower

Perfect Delivery per order, on time, incomplete, damage, cold chain, loading and departures, partner and driver scorecards, route risk, root-cause Pareto, actions and a weekly review. A deep dive on one failure: where it concentrates, the evidence rows and an investigation that becomes a verified action. Reads your Excel workbook.

> *Every week, to go from the customer's outcome to the operational driver, the root cause and an action that is checked.*

HOW TO USE IT

1. Load your files: deliveries, routes, incidents and actions, as CSV or Excel, or one workbook. Or “Load the example”.
2. Enter only the targets you have approved.
3. Filter by dates, partner, shift and zone.
4. Read the tabs, from the overview to the “Weekly review”.
5. In the “Deep dive”, pick one failure, see where it concentrates and which incidents record it, write the investigation and “Create the linked action”.

WHAT YOU GET

Perfect Delivery for every order, scorecards, route risk, a Pareto of root causes, a deep dive per failure with its case register, and an action tracker. Copy the review, print it, or export tables as CSV.

YOUR DATA

Your files are read in the browser. Nothing is uploaded.

Open it stivencatalyst.com/tools/cx-control-tower/

ZENITH | DIAGNOSTIC | 2 MIN

KPI Diagnostic

A number turned red. Ten statements show whether the cause is clarity, skill, capacity, process design or ownership, with first moves for each.

> *A number turned red. Before you push harder on it, find out where the cause sits.*

HOW TO USE IT

1. Name the KPI, if you like.
2. Rate ten statements.
3. Press “See the result”.

WHAT YOU GET

The cause that fits best (clarity, skill, capacity, process design or ownership), with three first moves and a “Question for the floor”; when no single cause stands out, the advice to go and see the work. A score for each cause either way, to take on to 5 Whys or the Action Tracker.

YOUR DATA

Nothing you enter is stored or sent.

Open it stivencatalyst.com/tools/kpi-diagnostic/

ZENITH | ROOT CAUSES | 5 MIN

Pareto 80/20

Which few causes make most of your delays, errors, idle time or complaints? Templates for delivery, warehouse and hotel, CSV and Excel import, a checked chart.

> *When a few causes make most of the trouble and you need to know which to fix first.*

HOW TO USE IT

1. Choose a template: delivery, warehouse or hotel. Or “Load the example”.
2. Bring your data: a CSV or Excel file, or cells pasted from a sheet.
3. Check the columns: cause, count, value, date.
4. Rank the causes by how often they happen or by what they cost. If you like, compare before and after.

WHAT YOU GET

A checked Pareto chart with every row accounted for, “Where to start”, and exports as PNG, SVG and CSV.

YOUR DATA

Files are read in the browser, Excel included. Up to 20,000 rows are kept.

Open it stivencatalyst.com/tools/pareto/

ZENITH | PROBLEM SOLVING | 20 MIN

A3 Report

One problem on one sheet, the Toyota way: the facts and the number, the target and its date, the root cause, countermeasures with an owner each, and the follow-up. An eight-point check, print on A3 or A4, Word.

> *When one problem deserves one sheet: the facts, the target, the cause and the follow-up, agreed before anyone starts.*

HOW TO USE IT

1. Start a “New A3” with a title, an owner and a date.
2. Fill the seven boxes in order: the background, the current condition with its key number, the target and its date, the root cause, the countermeasures with an owner each, the plan, and how you will check.
3. Bring in what you already have: “Read the Pareto result” for the current condition, “Take from 5 Whys” for the root cause.
4. Read the “Quality check”, then “Send countermeasures to the Action Tracker”.

WHAT YOU GET

One sheet with the gap between the baseline, the target and the latest value, and an eight-point check of the sheet itself. Print it on A3 or A4, copy it as text or “Download Word”.

YOUR DATA

Every A3 is saved in this browser as you type, in a list where you can open, duplicate or delete it.

Open it stivencatalyst.com/tools/a3-report/

ZENITH | IMPROVEMENT | WEEKLY

Kaizen Board

Every improvement idea of the team on one board, from Idea through Plan, Do and Check to Adopted, with an effort and impact matrix that shows the quick wins. Adoption rate, days to adopted, savings per month and year, and the idea of the month.

> *Every week, to collect the team's ideas and give each one an answer within the week.*

HOW TO USE IT

1. Write the idea, what it removes, the area and who proposed it, rate its effort and impact from 1 to 5, add a saving if you know it, and "Add to the board".
2. Move each card through Plan, Do and Check to Adopted, or drop it with a reason the person can read.
3. Start with the quick wins: low effort and high impact, top left on the matrix.
4. A big idea goes on with "Take to A3"; the next step of a card goes to the Action Tracker with "Add to actions".

WHAT YOU GET

The board with the days each card has waited, the open ideas ranked by priority, the adoption rate, the days from idea to adopted, the savings per month and per year, and the idea of the month. Download it as CSV or Excel.

YOUR DATA

The board stays in this browser. Nothing is sent or uploaded.

Open it stivencatalyst.com/tools/kaizen-board/

ZENITH PEOPLE 15 MIN

Skills Matrix

Rate each person on each task from 0 to 4 in an ILU grid, with templates for warehouse, hotel front office and delivery station. Cover against target, single points of failure, cover per shift and a training plan that pairs a level 4 with a trainee, straight into actions.

> *Before you plan the rota or the training, to see which tasks hang on one person.*

HOW TO USE IT

1. Name the team and “Load the tasks” of a template, warehouse, hotel front office or delivery station, each with its criticality, minimum level and target.
2. Add the people, with their shift.
3. Rate each person on each task, together with them, from 0, not trained, to 4, can train. A click raises the level by one.
4. “Suggest a plan”: it pairs each trainee with a level 4 on the same task, the most critical gaps first. Then “Send plan to the Action Tracker”.

WHAT YOU GET

The cover against target of every task and shift, the single points of failure, who is below a minimum and the flexibility index, and with “Take a snapshot” each month, whether the training works. The matrix and the plan download as CSV or Excel.

YOUR DATA

The matrix stays in this browser. “Anonymise names” shows each person as a number, on the page and in the exports.

Open it stivencatalyst.com/tools/skills-matrix/

ZENITH EQUIPMENT ONGOING

OEE

Log each shift of a machine with its stops, pieces and rejects. Availability, performance, quality and OEE, the six big losses day by day, and the one to attack first.

> *Every shift, for the machine or the line that sets the pace.*

HOW TO USE IT

1. Add each machine with its ideal rate from the machine plate, or its ideal cycle, and “Save machine”.
2. Log a shift: the planned minutes, the stops with their reasons and minutes, the pieces made and the rejects. Rows can be imported.
3. Planned stops, such as breaks, meetings or no orders, are taken out of the planned time.
4. Choose a machine or all of them, and the period.

WHAT YOU GET

Availability, performance, quality and OEE per machine, the six big losses day by day, the top stop reasons and the loss to attack first, with a “Question for the floor”. Copy or print it, or take it on to 5 Whys, Pareto 80/20 or the Action Tracker.

YOUR DATA

The machines and the log stay in this browser and download as CSV or Excel.

ZENITH HOTEL ONGOING

Hotel KPIs

Each night's rooms sold, revenue, no-shows, rooms out of order and complaints, pasted from the PMS. Occupancy, ADR and RevPAR against budget, the month's forecast, the weekday pattern, the revenue that leaked and a morning report to copy.

> *Every morning, with last night's figures from the night audit or the PMS.*

HOW TO USE IT

1. Enter the total rooms and the budget of the month: occupancy and ADR, and RevPAR if it is not simply the two multiplied.
2. Log each night: rooms available and sold, room revenue, arrivals, departures, no-shows, walk-ins, rooms out of order, breakfast covers and complaints. Or paste the PMS export with “Import rows”.
3. Read the month to date against the budget, and where to start.
4. “Copy the morning report” for the meeting.

WHAT YOU GET

Occupancy, ADR and RevPAR against the budget, the forecast for the month, the weekday pattern, the best and the worst night, and the revenue that leaked through no-shows and rooms out of order. The weakest KPI goes on to 5 Whys or the Action Tracker.

YOUR DATA

The log stays in this browser and downloads as CSV or Excel. A night logged twice keeps its latest figures.

Open it stivencatalyst.com/tools/hotel-kpis/

ZENITH LEAN 15 MIN

Gemba Walk

Layered process audits by team lead, area manager and site lead, with yes or no checks on the standard for warehouse, hotel and delivery station, and a waste walk that counts the 8 wastes, Mura and Muri. Compliance per week and layer, where the no answers sit, which layer is late, and findings straight into actions.

> *Where the work is done: the team lead every day, the area manager every week, the site lead every month.*

HOW TO USE IT

1. Choose a layered process audit or a waste walk, the layer, a checklist for warehouse, hotel or delivery station, and the area.
2. On the floor, answer each question yes, no or n.a., or tap + for every waste you see. “Start the timer” to know how long the walk took.
3. “Save walk”, then “Add findings to actions” for every no you could not fix on the spot.
4. Set how often each layer walks: the results flag a layer that is late.

WHAT YOU GET

Compliance per week and layer, the questions that fail most and the areas where the no answers sit, the wastes by area with the vital few, and the next walk of each layer. “Print the walk sheet” to walk with paper.

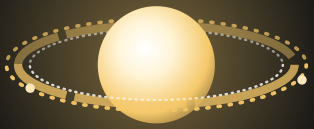

YOUR DATA

The walks stay in this browser and download as CSV or Excel.

Process Manager

THE WHOLE SYSTEM

You look at the whole system: find where a problem really sits, prove it with data, and change the process so it stays fixed.

Eight tools and a course for the whole system: tell a real change from noise, reach a root cause you can change, rate the risks, time and map the flow, write the standard, and run an improvement as a project.

ITS TOOLS

Sigma & Control Chart 35
5 Whys 36
Fishbone 37
FMEA 38
Process Lab 39
Time Study 40
Value Stream Map 41
Standard Work 42
Six Sigma in the Warehouse 43

A ROUTINE

Where each tool fits into the work of this role, step by step. 34

LUMEN · PROCESS MANAGER

A routine

Where each tool fits into the work of this role, step by step.

Every problem	Reach a root cause you can change before anyone proposes a fix. · 5 Whys
Every week	Put the process on a control chart and react only to real signals. · Sigma & Control Chart
Every quarter	Rank the losses and choose the next improvement project. · Pareto 80/20
Every project	Run it through Define, Measure, Analyse, Improve and Control. · Six Sigma in the Warehouse
When a problem returns	Gather the people who do the work for fifteen minutes, fill the bones, vote, and leave with the likely causes as actions to verify on the floor. · Fishbone
When a process changes	Walk the changed steps with the team, rate each failure mode and give every high-priority row an action with an owner and a date. · FMEA
Before and after a change	Measure twenty values before you change the process and twenty after, then let the test say whether the change is real. · Process Lab
Every week	Time one station for five cycles, compare it with takt and move the first element that fits. · Time Study
Every month	Walk one value stream from the customer back, count every pile, and turn the largest wait into a kaizen burst with an owner. · Value Stream Map
When a problem returns	Write the job as a standard with a reason for every key point, start a new version when it changes, and train the team on it. · Standard Work

LUMEN | SIX SIGMA | 5 MIN

Sigma & Control Chart

Turn defects into a sigma level, combine on time, undamaged and complete into perfect delivery, and see whether a bad day is a signal or noise.

> *When you need to know how good a process is, and whether a bad day is a real change or normal noise.*

HOW TO USE IT

1. For the sigma level: units, defects and chances per unit.
2. For perfect delivery: on time, undamaged and complete, in percent.
3. For the control chart: what you count, by day or by week, and a baseline.
4. Add the days one by one with “Add a day”, or import rows.

WHAT YOU GET

The sigma level, perfect delivery, and a control chart that lists the “Signals to investigate”. Download as CSV, copy or print.

YOUR DATA

Everything stays in this browser.

Open it stivencatalyst.com/tools/sigma-control-chart/

LUMEN | WORKSHEET | 10 MIN

5 Whys

Move from a symptom to a root cause you can change, then agree one countermeasure, one owner and one check. Print it or save it as PDF.

> *When a problem comes back. Start from what happened, not from who did it.*

HOW TO USE IT

1. Write the problem.
2. Ask why, five times or as often as it takes.
3. Name the root cause: something you can change.
4. Agree a countermeasure, an owner, a due date and how you will know it worked.

WHAT YOU GET

A worksheet to print, save as PDF or copy as text. The log tools can send their problem straight into it, and the countermeasure goes on with “Put the countermeasure on the handover” or “Add the countermeasure to the Action Tracker”.

YOUR DATA

The worksheet stays in this browser.

Open it stivencatalyst.com/tools/five-whys/

LUMEN | ROOT CAUSES | 15 MIN

Fishbone

Put the effect at the head and collect causes with the team on the 6M, 4P or hotel bones, each with its why. Votes and likely causes rank them, the likely ones become actions to verify, and the top one goes to 5 Whys or the causes to Pareto.

> *When the team needs to see every possible cause of one effect before it chooses which to check.*

HOW TO USE IT

1. Write the effect at the head of the fish, as a fact, with the number if you have it.
2. Choose the bones: 6M for production, warehouse and delivery, 4P for a service, or the five bones of a hotel.
3. Fill each bone with the team, up to 12 causes, each with its why.
4. Count the votes and mark the likely causes, then “Send likely causes to actions” to have each one verified on the floor.

WHAT YOU GET

The fish as one picture, the causes ranked by votes, and the top cause ready for 5 Whys or all of them for Pareto 80/20. “Copy as outline”, print it on one page, or download it as CSV or Excel.

YOUR DATA

Your diagrams stay in this browser, in a list where you can open, duplicate or delete them.

Open it stivencatalyst.com/tools/fishbone/

LUMEN | RISK | 30 MIN

FMEA

Write down how each process step can fail, rate severity, occurrence and detection, and get the RPN and the AIAG-VDA action priority. A heat map, the top ten risks and the actions with owners until the re-rating shows the risk is gone.

> *Before a process starts or changes, or after a failure that must not come back: rate the risks while they are still cheap.*

HOW TO USE IT

1. Name the process, the owner, the date and the revision, and “Fill the steps” from a template, or “+ Add a failure mode”.
2. For each step, write how it can fail, the effect, the cause and the controls you have today.
3. Rate severity, occurrence and detection from 1 to 10. Read the action priority first, the RPN second.
4. Give each high or medium row an action with an owner, and rate the row again when the action is done.

WHAT YOU GET

The action priority (AIAG-VDA) and the RPN of every row, a heat map of severity against occurrence, the top ten risks, and the RPN before and after the actions. “Add open actions to the Action Tracker”, print on A3 or A4, or download as CSV or Excel.

YOUR DATA

The sheet stays in this browser. “Save the sheet (.json)” keeps a copy you can open again on another device.

Open it stivencatalyst.com/tools/fmea/

LUMEN | SIX SIGMA | 10 MIN

Process Lab

Paste a column of measurements and see an I-MR chart with the Nelson rules, Cp, Cpk and PPM against your specification, and whether a before/after change is real or noise. Every number in plain words.

> *When you measure one thing at a time, minutes, seconds, weights, and need to know whether the process is stable, whether it is capable, or whether it really changed.*

HOW TO USE IT

1. Paste a column of measurements, or a date and a value per line, and say what is measured and in which unit.
2. Add the specification limits, LSL and USL, and a target if you have one.
3. Under “Before / after”, compare two defect rates or two sets of measurements.
4. Under “How many to measure”, find the sample you need to see the change you are after.

WHAT YOU GET

An I-MR chart with the Nelson rules, the histogram against the specification, Cp, Cpk and PPM, and whether a change is real or noise, every number with a sentence that says what it means. “Add the signal to actions”, or download as CSV or Excel.

YOUR DATA

Your numbers stay in this browser. Nothing is sent or uploaded.

Open it stivencatalyst.com/tools/process-lab/

LUMEN LEAN 20 MIN

Time Study

Time each element over five cycles with a stopwatch, space bar as the lap key. Get the standard time per station, takt from demand, a Yamazumi against it and the first element to move.

> *At the line, with a stopwatch, before you balance the work again or write the standard.*

HOW TO USE IT

1. Enter the demand and the available minutes per shift: the tool gives the takt.
2. Add the stations in the order of the flow, each with its elements, marked VA, NVA or W.
3. "Start timing" and press "Lap", or the space bar, at the end of each element. Time at least three cycles per station; five is better.
4. Read the Yamazumi against the takt, and the balance moves.

WHAT YOU GET

The standard time of each element with its spread, a Yamazumi of every station against the takt, how much of the time is waste, the bottleneck and the first element to move. "Add the balance moves as actions", or download the standard times as CSV or Excel.

YOUR DATA

The stations and the timings stay in this browser. Timings can also be typed or pasted.

Open it stivencatalyst.com/tools/time-study/

LUMEN LEAN 30 MIN

Value Stream Map

Map one flow from supplier to customer with the pieces waiting between the steps. Get the lead-time ladder, PCE, takt and the bottleneck, then draw the future state and send its kaizen bursts to the Action Tracker.

> *When the lead time is long and you need to see where it goes, from the supplier to the customer.*

HOW TO USE IT

1. Name the product or service family, the customer demand per day and the working minutes.
2. “Fill the steps” from a template, or add them: cycle time, changeover, uptime, yield and operators.
3. Walk the stream and count the pieces waiting before each step: the tool turns them into time.
4. Switch to the “Future state”, change what the improvements change, and write each change as a kaizen burst.

WHAT YOU GET

The map with its lead-time ladder, the share of the lead time that is work, the takt and the steps above it, the current and the future state. “Send kaizen bursts to the Action Tracker”, or download as CSV or Excel.

YOUR DATA

The map stays in this browser. Nothing is sent or uploaded.

Open it stivencatalyst.com/tools/value-stream-map/

LUMEN | STANDARD | 20 MIN

Standard Work

One job as a TWI breakdown: major steps, key points marked Safety, Quality, Technique or Cost, and a reason for each, with the time per step against the takt. Versions with change notes, print on A4, Word.

> *When one job must be done the same way on every shift, and a new person must be able to learn it.*

HOW TO USE IT

1. Start from a template with “Use this template”, or describe the job: title, process, area, owner, takt or target time, PPE and tools.
2. Write the major steps in order, each in a few words, with its time.
3. Add the key points that make or break each step, marked Safety, Quality, Technique or Cost, each with its reason.
4. Read the “Quality check”. When the job changes, start a “New version” and write what changed.

WHAT YOU GET

A job breakdown sheet with the time per step against the takt and its change history, to print, copy as text or “Download Word”. “Train the team on it” puts the training in the Action Tracker; “Audit this standard” opens the 5S Audit.

YOUR DATA

Every standard is saved in this browser as you type, in a list where you can open, duplicate or delete it.

Open it stivencatalyst.com/tools/standard-work/

LUMEN | COURSE | 45 MIN

Six Sigma in the Warehouse

DMAIC in five steps on one warehouse case, with the tool to use at each step, three questions per step, the eight wastes and a project charter.

> *When an improvement is a project, not a quick fix.*

HOW TO USE IT

1. Work through Define, Measure, Analyse, Improve and Control. Each step has its output, key ideas, common mistakes, a real case, the tools that belong to it and “Check yourself”.
2. Read the eight wastes and the glossary.
3. Fill in the project charter, or “Fill with the course case” to see an example.

WHAT YOU GET

A DMAIC project charter to print, save as PDF or copy as text.

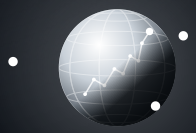

YOUR DATA

Your answers and your charter are kept only in this browser.

Open it stivencatalyst.com/tools/six-sigma-dmaic/

FAMILY

Atlas

Career

EVERY ORBIT

Carry your experience into the next role: a designed CV, an ATS CV and a matching cover letter.

Three tools for the next role: a designed CV, a CV that screening software reads correctly, and a letter that matches.

ITS TOOLS

CV Builder 45
ATS CV 46
Cover Letter 47

A ROUTINE

Every quarter	Add one result with a number to your CV while you still remember it. · CV Builder
Before you apply	Check your CV against the job ad, the way screening software reads it. · ATS CV
Every application	Write the letter for this company, not for any company. · Cover Letter

ATLAS CAREER 20 MIN

CV Builder

A designer-quality CV on live A4 pages: photo, key figures, and company logos found from a website. In English, German or Albanian, saved as PDF.

> *When your CV should look designed, not typed.*

HOW TO USE IT

1. Choose the CV's language, English, German or Albanian, its spacing and colours.
2. Add a photo, your contact details, up to four key figures, a profile and your key achievements.
3. Add your experience. A company's website brings in its logo.
4. Add education, skills and languages, then read the CV check.

WHAT YOU GET

A CV you watch change on real A4 pages, downloaded as PDF, and a backup file you can open again with “Open a backup file”.

YOUR DATA

Kept in this browser, photos and logos included. Only the company websites you type go to Google's icon service, to fetch the logos.

Open it stivencatalyst.com/tools/cv-builder/

ATLAS | CAREER | 10 MIN

ATS CV

Drop in the CV you have, as PDF or Word. Get a clean one-column version that application software reads, matched to the job ad, as PDF, Word or text.

> *When software reads your CV before a person does.*

HOW TO USE IT

1. Start from a PDF or Word file, from the CV Builder, or from pasted text, and “Sort it into the fields”.
2. Choose the language, font and heading colour.
3. Check contact, summary, experience and the other sections.
4. “Match a job ad”: paste the ad and read the ATS check.

WHAT YOU GET

Your CV as PDF, Word (.docx) and plain text.

YOUR DATA

Kept in this browser. The PDF reader loads from this site, only when you open a PDF.

Open it stivencatalyst.com/tools/ats-cv/

ATLAS | CAREER | 15 MIN

Cover Letter

The letter in the same design as your CV, with your details taken from it and a first draft from a few answers. PDF or Word.

> *When the letter should go with your CV, in the same design.*

HOW TO USE IT

1. Take your details “From the CV Builder” or “From the ATS CV”.
2. Choose Modern or Classic, the colours, the font and the photo.
3. Add the company and the person to write to.
4. Answer a few questions, from the position to your start date, and “Write the first draft”. Then edit it, sign it and read the letter check.

WHAT YOU GET

The letter as PDF, Word (.docx) and plain text.

YOUR DATA

Kept in this browser, photo and signature included. Nothing is uploaded.

Open it stivencatalyst.com/tools/cover-letter/

FROM A TOOL TO A PRACTICE

The coaching workspace

Each role page opens a coaching workspace above the tools. It turns one good result into a habit you can show.

1. Choose your context: logistics or warehouse, hotel or service; new to the role or experienced. A name is optional.
2. Create a project with a goal, a measurement and a review date.
3. Follow your role's learning path: modules with a method, a case, a decision with feedback, an assignment and a reflection.
4. Save evidence from real work. A dated review at your workplace counts; a quiz alone does not.
5. Reflect with GROW. Every reflection ends in an action with an owner and a due date.
6. Print a report for a human coach, or export a backup of the whole workspace.

A tool opened from your project lets you save its result and an action into that project. On a normal visit, none of this loads.

> Here too there is no server and no account: no shared team database, and no automatic sync between devices.

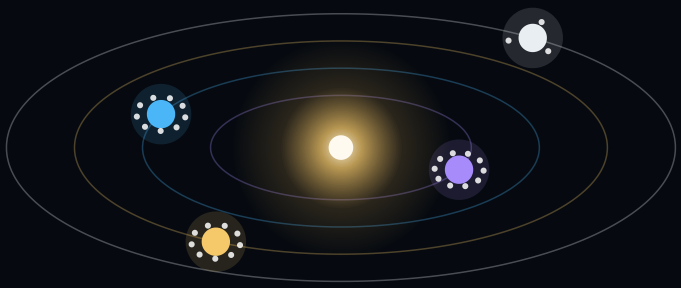

EDITION 3

What could come next

Ideas under consideration, not promises with dates. Tell me which one would help you most.

- The workplace profile in every tool, so that the site, the shifts and the targets are typed only once.
- The Delay Analyzer for routes without a recorded departure time.
- A shared space for a coach and a team, but only with real accounts and access control, because the promise of these tools is that your data stays yours.

When a tool changes, this guide gets a new edition. The newest one is always on the site, and the earlier ones stay there as they were printed.

See clearly.
Think differently.
Act deliberately.

All the tools, free, in English, German and Albanian:

stivencatalyst.com/tools.html

The Tools Guide · Edition 3 · October 2026 · Stiven Janaqi
