SECOND SERIES · OCTOBER 2026

MANAGEMENT REVIEW

Management without theatre.

AI

AI AND THE RULES AT WORK: THE EU AI ACT

What applies and when, after the 2026 delay, how many firms use AI, the four levels of risk, what an employer must do before a high-risk system starts, what AI literacy asks, and a card for each AI system in a team.

16 months later than first planned: the AI Act's rules for high-risk AI used to hire and manage workers now apply from 2 December 2027.

In this issue

AI tools can plan shifts, sort job applications or check work, and since 2024 the EU has had a law for them. What does the AI Act ask of a manager whose team uses AI, what applies already, and what was postponed? These pages describe the law; they are not legal advice.

The AI Act entered into force in August 2024. Its bans and the duty of AI literacy have applied since February 2025; in July 2026 a second regulation moved the rules for high-risk uses, among them hiring and managing workers, to December 2027. By Eurostat's count, one EU firm in five used AI in 2025. The Act sorts uses into four levels of risk, bans emotion recognition at work, and gives employers who deploy high-risk systems duties of their own, starting with informing the team.

HOW TO READ THIS ISSUE

Figure
Every figure has its source and year at the foot of its page.

Our reading
Where the editor interprets rather than the research, it says so.

Practice
The steps and the card are proposals to try, not research results.

COVER STORY

What applies, and when

The AI Act, Regulation (EU) 2024/1689, entered into force on 1 August 2024 and applies in stages. In July 2026 the EU changed part of its calendar with a second regulation, the Digital Omnibus on AI.

2025

2 February: the bans, among them emotion recognition at work, and the duty of AI literacy.

2026

2 August: most of the Act, including transparency for chatbots and deepfakes.

2027

2 December: high-risk rules for Annex III uses, among them work and hiring.

2028

2 August: high-risk rules for AI built into regulated products.

The delay is now law. The Commission proposed it in November 2025, because the standards for high-risk systems were late; Parliament voted on 16 June 2026, the Council approved on 29 June, and Regulation (EU) 2026/1744 entered into force on 27 July 2026. Annex III moved from 2 August 2026, the product rules from 2 August 2027. Since August 2025 the rules for general-purpose AI models and the penalties have applied.

OUR READING

Only the high-risk rules were moved. The bans and the duty of AI literacy have applied since February 2025, as before.

Sources: European Parliament and Council of the European Union, Official Journal of the EU, 2024; European Parliament and Council of the European Union, Official Journal of the EU, 2026; European Commission, Shaping Europe's digital future, 2026

Dates as in Article 113 as amended in 2026. The Act also covers firms outside the EU when the output of their AI is used in the EU (Article 2). We describe the law here; we do not give legal advice.

THE NUMBERS

AI in one firm in five

Eurostat asks enterprises in the EU with at least 10 employees whether they use AI technologies, such as text mining, speech recognition or the generation of language. The share has more than doubled in two years.

EU ENTERPRISES WITH 10 OR MORE EMPLOYEES THAT USE AI

Size makes the difference: in 2025, 55% of large enterprises used AI, 30% of medium-sized and 17% of small ones. In the Act's terms, every firm that uses an AI system under its own authority is a deployer, whether it built the system or bought it.

OUR READING

Most firms will meet the Act as users of bought tools. The duties that reach them are those of the deployer.

Sources: Eurostat, Usage of AI technologies increasing in EU enterprises, 2025; Eurostat, Use of artificial intelligence in enterprises (Statistics Explained, data 2025); European Parliament and Council of the European Union, Official Journal of the EU, 2024

EU-27, enterprises with 10 or more employees; micro-enterprises are not counted. Use of at least one AI technology, not only generative AI. The deployer is defined in Article 3(4) of the Act.

THE MODEL

Four levels of risk

The Act regulates uses of AI by the risk they carry for health, safety and fundamental rights. The European Commission describes four levels, from banned to free of new rules.

01	**Unacceptable: banned**	Among the practices in Article 5: inferring the emotions of people at the workplace, except for medical or safety reasons; social scoring; manipulation.
02	**High: strict duties**	Annex III, point 4: AI to recruit and select, to decide on promotion or dismissal, to allocate tasks by behaviour or traits, or to monitor and evaluate performance.
03	**Transparency: tell people**	People must know when they are talking to a chatbot; deepfakes must be labelled (Article 50).
04	**Minimal: no new rules**	For example spam filters or AI in video games.

In its 2025 guidelines the Commission counts as banned a call centre that tracks its employees' anger through webcams and voice recognition. Tracking customers is not, if staff are not tracked at the same time. Fatigue and pain are physical states, not emotions.

OUR READING

The level follows the use, whatever the software: the same tool can plan routes or rank people.

Sources: European Commission, Shaping Europe's digital future, 2026; European Parliament and Council of the European Union, Official Journal of the EU, 2024; European Commission, 2025

An Annex III system can fall outside the high level, for instance if it only does a narrow procedural task (Article 6(3)); one that profiles people never does. The guidelines are not binding.

HOW IT IS APPLIED

Before the system starts

A firm that uses a high-risk AI system under its own authority is its deployer. Article 26 gives the deployer duties of its own, apart from those of the provider; for Annex III systems they apply from 2 December 2027.

1. **Follow the instructions**
   Use the system as the provider's instructions for use say (26(1)).

2. **Name the people who oversee it**
   With the competence, training and authority to do it, and support (26(2)).

3. **Inform the team first**
   Employers tell workers' representatives and the affected workers before the system is used at work (26(7)).

4. **Monitor and report**
   If a risk appears, inform the provider and the authority and suspend use; report serious incidents (26(5)).

5. **Keep the logs, tell the people concerned**
   Logs for at least six months; people about whom it decides or helps decide are told (26(6), 26(11)).

OUR READING

Before the first use, settle who will tell the team and when. The Act leaves no room for doing it afterwards.

Sources: European Parliament and Council of the European Union, Official Journal of the EU, 2024; European Parliament and Council of the European Union, Official Journal of the EU, 2026

A selection of the duties in Article 26; the Digital Omnibus moved their date and left their content as it was. The notice follows national rules on informing workers. This summary does not replace legal advice.

HOW IT IS MEASURED

AI literacy: what counts

Article 4 has applied since 2 February 2025 to every provider and deployer, whatever the risk of the system. The Digital Omnibus softened its wording in 2026; the duty remains.

Until July 2026	Since July 2026
Ensure, to their best extent, a sufficient level of AI literacy	Take measures to support the development of AI literacy
of staff and others who operate AI on their behalf	No guaranteed level for any individual

Both versions weigh people's knowledge, experience and training, the context of use and those affected. The Commission's Q&A asks for a general understanding of AI, the firm's role as provider or deployer and the risks of its systems. No certificate is needed; an internal record of training is enough. National market surveillance authorities supervise from August 2026.

HYPOTHETICAL EXAMPLE, A DISPATCH TEAM WITH TWO AI TOOLS

Who uses AI	12 of 14 people, a route planner and a chatbot
Training	one hour on limits and errors; 10 of 12 done

The record names the date, the content and who took part. The team and its figures are made up.

Sources: European Parliament and Council of the European Union, Official Journal of the EU, 2024; European Parliament and Council of the European Union, Official Journal of the EU, 2026; European Commission, Shaping Europe's digital future, 2026

The two wordings are summarised from Article 4 before and after Regulation (EU) 2026/1744; the example is the editors'.

More in the essay “Watch how I do it” is not training

TOOL OF THE ISSUE

The AI card for a team

One card for each AI system the team uses. Fill it in before the first use, keep it with the training record, and look at it again when the system or its use changes. Problems with the system go into the shift handover, with an owner and a time.

01 System and provider what it does, who supplies it, where the instructions for use are

02 Use and level of risk what we use it for; banned, high, transparency or minimal; who decided

03 Oversight who oversees it, with what training, and who may stop it

04 Team informed when and how; workers' representatives too

05 AI literacy what people learned, when, where the record is

06 Problems and logs who reports to the provider, where the logs are kept, for how long

Sources: European Parliament and Council of the European Union, Official Journal of the EU, 2024; European Commission, Shaping Europe's digital future, AI Act: Regulatory framework for AI, 2026; European Commission, Shaping Europe's digital future, AI Literacy: Questions & Answers (updated 27 July 2026)

The card is the editors' proposal, drawn from Articles 4, 5, 26 and Annex III of the AI Act and the Commission's four levels. It replaces neither legal advice nor the provider's instructions.
