THE RHYTHM OF MANAGEMENT: THE DAY, THE WEEK, THE MONTH

How fragmented a manager's day is, where chief executives' time goes, the daily, weekly and monthly routines that give it a shape, and a card for your own rhythm.

In this issue

A manager's week fills itself: calls, questions, problems that cannot wait. A few fixed routines keep the important things from being crowded out: a short daily check, a weekly conversation, a monthly look back.

Henry Mintzberg found that most of what chief executives did lasted minutes, not hours. Decades later, 27 CEOs spent 72% of their working time in meetings. Lean answers with standard work for leaders and short daily meetings in tiers; Andy Grove with a one-to-one of at least an hour. In a children's hospital, daily huddles were part of an effort that almost halved one kind of serious event, though never on their own.

HOW TO READ THIS ISSUE

Our reading
Where the editors interpret rather than the research, it says so.

Practice
The steps and the card are proposals to try, not research results.

COVER STORY

Nine minutes

Henry Mintzberg spent a week with each of five chief executives and recorded everything they did. In 1975 he summed up what he had seen in Harvard Business Review.

“Half the activities engaged in by the five chief executives of my study lasted less than nine minutes, and only 10% exceeded one hour.”

5	½	10%
chief executives, one week each	of their activities lasted less than nine minutes	lasted more than an hour

Mintzberg set the folklore of the calm, systematic planner against what he saw: work that was brief, varied and constantly interrupted, and that leaned towards action rather than reflection.

OUR READING

When the day is cut into nine-minute pieces, the important things need fixed places, or the urgent ones take every slot.

THE NUMBERS

Where 60,000 hours went

Michael Porter and Nitin Nohria had the assistants of 27 CEOs log their time, around the clock, in 15-minute blocks, for 13 weeks: nearly 60,000 hours. The CEOs worked 62.5 hours a week on average.

SHARE OF THE CEOS' WORKING TIME

43%

36%

OUR READING

Even at the top, more than a third of the time goes on reacting. A fixed rhythm keeps the rest from going the same way.

The four areas are shares of all working time and do not add up to 100%.

THE MODEL

A rhythm in three beats

In Creating a Lean Culture, David Mann names four elements of lean management: standard work for leaders, visual controls, a daily accountability process and discipline. Andy Grove adds the weekly conversation.

01	**The day: short meetings in tiers**	The team at the start of the shift, then the supervisors, then the managers: a problem travels up the same morning.
02	**The week: one-to-ones**	At least an hour, with an agenda the employee prepares; more often with someone new to the task, less often with a veteran.
03	**The month: a look back**	The numbers of the month, what the daily meetings kept bringing up, and one change for the next month.

Mann estimated that standard work fills about 80% of a team leader's day. Higher up it fills less, and consists mostly of following up the level below.

OUR READING

A rhythm means fewer meetings: at fixed times, each with one job.

The day follows Mann, the week Grove; the monthly look back is the editors' addition.

WHAT THE RESEARCH SAYS

What a daily huddle can do

A children's hospital with 539 beds introduced short daily meetings in three tiers: on the wards, among charge nurses and among leaders. They looked ahead at risks, reported safety events and moved resources to where they were needed.

UNRECOGNISED DETERIORATION ENDING IN INTENSIVE CARE, PER 10,000 PATIENT DAYS

The fall came with a bundle of measures: spotting risk early, frequent huddles on the wards, and ways of learning from each event. There was no control group, so the share of the huddles cannot be separated out. A second study of the same hospital, based on 10 interviews and 6 focus groups, described how the huddles worked but measured no outcome.

OUR READING

A daily huddle costs little. What it is worth depends on what follows: the problem someone takes away and closes.

HOW IT IS MEASURED

Check the rhythm, not the calendar

In Mann's system, standard work is written down and the level above checks whether it happened. The same works for your own routines.

1. **Write the routines down**
   Each one with a time, a place and an owner.
2. **Mark each one, every day**
   Held or not, in one line.
3. **Count once a month**
   The share held, and why the others fell away.
4. **Change one thing**
   Move, shorten or drop the routine that keeps failing.

HYPOTHETICAL EXAMPLE, A SHIFT LEAD'S MONTH

Weekly	5 of 8 one-to-ones held
Monthly	1 of 1 review held

The weekly routine is the one that breaks, so that is where the change goes. The numbers are made up.

TOOL OF THE ISSUE

The rhythm card

One card for the routines of your role. Fill it in once, keep it where you work, and check it at the end of each week.

01 Every day time, place, ten minutes, who attends

02 What the daily meeting looks at safety, yesterday's numbers, today's risks

03 Every week one-to-ones: with whom, how long, who brings the agenda

04 Every month the review: which numbers, which question

05 What I stop doing to make room for the routines

06 Who checks me the person who sees whether the routines happened

EDITORIAL METHOD

Each figure was checked for its year, its publisher and what exactly it measures. Where the publisher's page could not be opened, the figure was checked against independent summaries and is marked “via”. The editors' interpretation is marked “Our reading”. Figures that could not be confirmed are not in the issue.
