MANAGEMENT REVIEW

Management without theatre.

ROLE

HOW MANY PEOPLE CAN ONE MANAGER LEAD?

Graicunas's count of relationships, the average and the median team in Gallup's data, what the work decides, what wide spans cost in hospitals, the weekly conversation and a card for one span.

12.1 direct reports per US manager on average in 2025, up from 8.2 in 2013. The median stayed at five or six.

In this issue

Organisations are removing layers of management, and the managers who remain lead more people. How many is too many? The question was first answered with a formula in 1933, and it is still answered with averages today.

V. A. Graicunas counted a manager's relationships and found that a fifth subordinate more than doubles them. In Gallup's data the average US manager now has 12.1 direct reports, while the median stays at five or six. Luther Gulick saw the answer in the work itself. Studies of nurse managers show what wide spans cost, and Gallup finds that the weekly conversation counts for more than the size of the team.

HOW TO READ THIS ISSUE

Figure
Every figure has its source and year at the foot of its page.

Our reading
Where the editor interprets rather than the research, it says so.

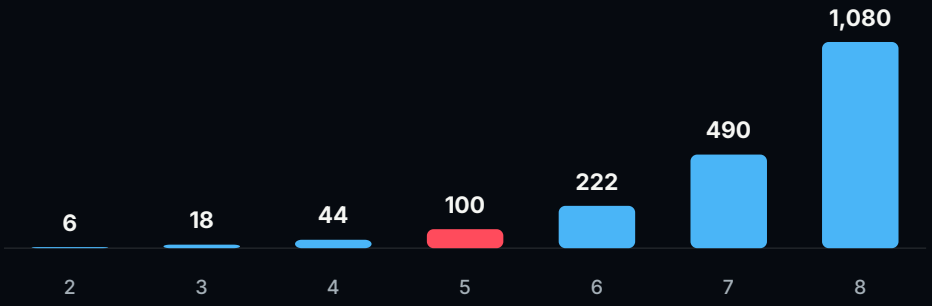

Practice
The steps and the card are proposals to try, not research results.

COVER STORY

Five, perhaps four

In 1933 V. A. Graicunas, a management consultant in Paris, set out to show why no superior should be directly responsible for too many subordinates. Supervisors, he wrote, measure their burden by the people they supervise one to one. They should count the relationships instead.

POSSIBLE RELATIONSHIPS OF ONE MANAGER, BY NUMBER OF DIRECT SUBORDINATES (GRAICUNAS, 1933)

With two subordinates, Dick and Harry, Tom has six: one with each, one with each while the other is present, and what each thinks of the other. A fifth subordinate takes the count from 44 to 100: “an increase in complexity of 127 per cent in return for a 20 per cent increase in working capacity”. His limit was five at most, most probably four.

OUR READING

The formula counts every relationship that could arise, whether or not it does. Its point still holds: the ties between people multiply far faster than the people themselves.

Source: V. A. Graicunas, Bulletin of the International Management Institute; reprinted in Gulick & Urwick (eds.), Papers on the Science of Administration (1937), 1933

Graicunas's widest count: direct, group and cross relationships. He made an exception for routine work in which tasks hardly touch. Paper of 1933, read in the 1937 reprint.

THE NUMBERS

Average 12, median 6

Gallup asks managers and leaders in the US: “How many people report directly to you?” Since 2013 the average has risen by nearly half; in the last year alone it went from 10.9 to 12.1.

AVERAGE NUMBER OF DIRECT REPORTS, MANAGERS AND LEADERS IN THE US

The median stayed at five or six every year. A minority of very large teams pulls the average up: 37% of managers lead fewer than five people, 13% lead 25 or more. Gallup links the latest rise to companies cutting middle-management roles. At the top the trend is older: in over 300 large US firms, the CEO's direct reports rose from 4.5 on average in 1986 to 6.8 in 1998.

OUR READING

An average of 12 says little about any one manager. Most lead a small team; a few carry very large ones.

Sources: Jim Harter, Gallup, 2026; Raghuram G. Rajan & Julie Wulf, Review of Economics and Statistics 88(4), 2006 (via NBER Working Paper 9633 (2003, revised 2020))

Gallup Panel, US: 2,402 to 8,795 managers and leaders a year; margin for each average ±0.5 to ±0.8. The 1986–1998 figures come from a pay survey of large firms (Rajan & Wulf).

THE MODEL

The work decides

Luther Gulick, who published Graicunas's paper in New York in 1937, gave no single number. Because the span is limited, a leader directs a few people, who direct others, down to the last person. How many depends on the work: several score if it is routine and in one room, only a few if it is varied and scattered.

A wider span holds when	A narrower span when
the work is routine and repeats	the work is varied and qualitative
results are easy to measure	results are hard to see
everyone does the same kind of work	each person does a different job
people work in one place	people are scattered
tasks hardly touch each other	each one's work interlocks with the others'

Lyndall Urwick put the limit at five, or at most six, people whose work is interrelated. Sir Ian Hamilton, a general whom Graicunas and Gulick both quote, advised groups of three near the top of an organisation and groups of six near its foot.

OUR READING

A span cannot be copied from another team. It follows from how alike the work is and how much each job depends on the others.

Sources: Luther Gulick, in Gulick & Urwick (eds.), Papers on the Science of Administration, Institute of Public Administration, Columbia University, 1937; L. Urwick, in Gulick & Urwick (eds.), Papers on the Science of Administration, Institute of Public Administration, Columbia University, 1937; V. A. Graicunas, Bulletin of the International Management Institute; reprinted in Gulick & Urwick (eds.), Papers on the Science of Administration (1937), 1933

Gulick, Urwick and Graicunas in Papers on the Science of Administration (1937). The two lists are the editors' summary of Gulick; the last line of each follows Graicunas's exception for work that does not interlock.

WHAT THE RESEARCH SAYS

What a wide span costs

Hospital restructuring left many nurse managers with far more units and staff. Amy Sanchez McCutcheon and colleagues studied 51 units in seven Canadian hospitals: 41 managers, 717 nurses and 680 patients.

The wider the span, the lower the nurses' job satisfaction and the patients' satisfaction. Wide spans also weakened the benefit of the best leadership styles: as spans grew, no style made up for them.

15 / 40
employees per manager: two thresholds above which engagement was worse, in a large US health system

4 of 4
areas with better engagement scores a year after a manager post was added

A 2023 review of 21 studies found the same pattern: wide spans came with overload for the manager and with staff who felt unable to reach their leader. Where hospitals added administrative support, managers gained time to train staff and to be with patients.

OUR READING

Good leadership does not stretch without limit. Past a certain size, the manager is simply not there often enough.

Sources: Amy Sanchez McCutcheon, Diane Doran, Martin Evans, Linda McGillis Hall & Dorothy Pringle, Nursing Leadership 22(3), 2009 (via Abstract at Longwoods); Deb Cathcart, Susan Jeska, Joan Karnas, Sue E. Miller, Judy Pechacek & Lolita Rheault, Journal of Nursing Administration 34(9), 2004 (via Abstract at Europe PMC; the thresholds from Boned-Galán et al. (2023)); Angel Boned-Galán, Nieves López-Ibort & Ana Gascón-Catalán, Nursing Reports 13(4), 2023; Jim Harter, Gallup, 2026

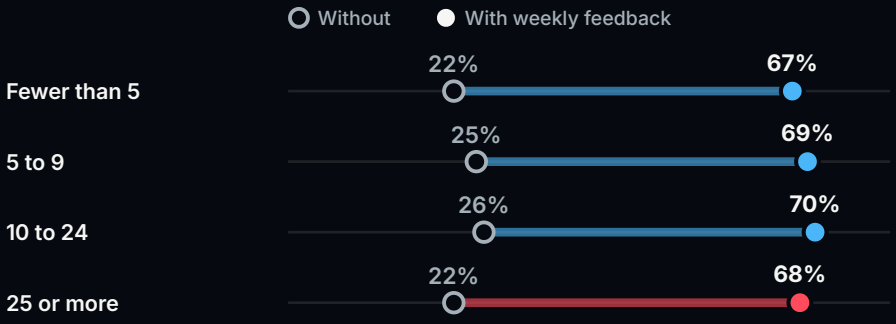

Studies of nurse managers, most of them surveys taken at a single point in time: they show associations. The two thresholds come from the 2023 review, not from the 2004 abstract. In Gallup's data, the most talented managers stay more engaged with large teams.

HOW IT IS MEASURED

Count the conversations

Gallup asked 44,025 US employees how big their team is and whether they had received meaningful feedback in the past week. Team size made little difference. The weekly conversation did.

ENGAGED EMPLOYEES BY TEAM SIZE, WITH AND WITHOUT MEANINGFUL FEEDBACK IN THE PAST WEEK

The manager's own workload counts too. 97% of US managers also do individual work, at a median of 40% of their time. Above that share, their own engagement falls as the team grows: from 36% with fewer than five reports to 32% with 25 or more.

Source: Jim Harter, Gallup, 2026

Gallup's employee data, 2022–2024, count the team a person mainly works on, not the manager's direct reports. “With” means they strongly agreed (5 of 5). Survey data: they show an association, not a cause.

TOOL OF THE ISSUE

The span card

One manager, one card. Fill it in for your own team, or with a manager who reports to you, and read the last two lines first.

01 Direct reports how many report to you directly; how many more through them

02 How alike the work is the same tasks for all, or a different job for each

03 How it interlocks can each work alone, or does one wait for another

04 Coaching needed who is new, who is learning a task, who runs alone

05 Time for my own work share of the week spent doing, not leading (Gallup's median: 40%)

06 Last week's conversations with how many of them; who has had none for a month

Sources: Luther Gulick, in Gulick & Urwick (eds.), Papers on the Science of Administration, Institute of Public Administration, Columbia University, 1937; V. A. Graicunas, Bulletin of the International Management Institute; reprinted in Gulick & Urwick (eds.), Papers on the Science of Administration (1937), 1933; Jim Harter, Gallup, 2026

A practice the editors propose, drawing on Gulick and Graicunas for the work, and on Gallup for the manager's own workload and the weekly conversation. The card sets no ideal number. The handover tool helps you give open issues an owner instead of carrying them yourself.
