EMPLOYEE MONITORING AND PERSONAL DATA

Forty-five pages of private messages and the Court's six questions, how many workplaces report monitoring systems, what Article 88 asks of national law, when an impact assessment is due, and a card for one measure.

11–6 votes: the Grand Chamber found that Romania's courts had failed to protect an engineer whose employer had read his private messages.

In this issue

E-mail, internet use, location, screens: an employer can now record them for a fraction of what it cost a few years ago. Whether a manager may do so depends less on the tool than on the questions asked before it starts. Here are those questions as European courts and regulators put them: a description of the law, not legal advice.

In 2017 the European Court of Human Rights found, by eleven votes to six, that Romania's courts had not protected an engineer whose employer had read his messages; its six factors are a test for any monitoring. In 2024, 7% of EU workplaces reported systems that monitor workers' performance or behaviour. In Germany, the EU Court's reading of Article 88 of the GDPR led the Federal Labour Court in 2025 to leave the general rule on employee data unapplied. An impact assessment and a one-page card close the issue.

HOW TO READ THIS ISSUE

Figure
Every figure has its source and year at the foot of its page.

Our reading
Where the editor interprets rather than the research, it says so.

Practice
The steps and the card are proposals to try, not research results.

COVER STORY

Forty-five pages

In July 2007 a private company in Bucharest recorded, in real time, the Yahoo Messenger account that a sales engineer had opened at its request to answer customers. When he said he had used it only for work, he was shown 45 pages of his messages with his brother and his fiancée. On 1 August he was dismissed.

01
The rules
banned personal use of company computers; said nothing about monitoring

02
Romanian courts
upheld the dismissal: he had been warned not to use company resources

03
Chamber, 2016
no violation of Article 8, by six votes to one

On 5 September 2017 the Grand Chamber found, by eleven votes to six, a violation of the right to respect for private life and correspondence. The courts had not established whether he had been told in advance that he might be monitored, or of its nature and extent, nor the reasons, whether lighter means would have served, or whether content had been read without his knowledge.

OUR READING

A ban on private use does not count as notice of monitoring. People have to know beforehand that they may be watched, and how.

Source: European Court of Human Rights, Grand Chamber, 2017

Bărbulescu v. Romania [GC], no. 61496/08, 5 September 2017. The case was brought against the Romanian state, not the employer, and the Court did not decide whether the dismissal was justified: it found that the courts had not weighed the interests at stake.

THE NUMBERS

One workplace in fourteen

ESENER 2024, EU-OSHA's survey of 41,458 workplaces with at least five employees in the EU, Iceland, Norway and Switzerland, asked which digital technologies they use. At each workplace, the person who knows best about health and safety answered.

WORKPLACES USING EACH TECHNOLOGY, EU-27, 2024

Of the workplaces that use at least one such technology, 35% had consulted employees about its possible effects on their health and safety, up from 24% in 2019.

OUR READING

One workplace in fourteen is more than a fringe. And where digital tools are in use, about two in three did not say they had asked their staff.

Source: European Agency for Safety and Health at Work (EU-OSHA), 2025

Shares of workplaces, not of workers, as reported by one person per workplace. 87%, 83% and both 7% are EU-27 averages; 15% is transport and storage. The report shows the other technologies only as bars, so we leave them out.

THE MODEL

Six questions before you watch

In Bărbulescu the Grand Chamber listed six factors that courts must weigh when an employer monitors communications (§ 121). Asked before a measure starts, they also work as a test for the manager:

1. **Were people told in advance?**
   Clearly, about the nature of the monitoring, before it begins.
2. **How far does it go?**
   Flow or content, all or part, how long, where, and who sees the results.
3. **What is the legitimate reason?**
   Reading content needs a weightier reason.
4. **Is there a less intrusive way?**
   Could the aim be reached without opening the content?
5. **What are the consequences?**
   For the person; and are results used only for the stated aim?
6. **What safeguards are there?**
   Above all, no access to content without prior notice.

One more guarantee: an employee who was monitored must be able to have a court review all of this (§ 122).

Source: European Court of Human Rights, Grand Chamber, 2017

The factors are the Court's, written for communications; using them as questions for any measure is the editors' reading.

WHAT THE RULES SAY

A rule that said too little

Article 88 of the GDPR lets Member States set more specific rules for employee data. Under paragraph 2 they must include suitable and specific measures to safeguard dignity, legitimate interests and fundamental rights, with particular regard to transparency and monitoring systems at work.

2018

§ 26(1) BDSG: employee data may be processed where necessary for the employment relationship.

2023

EU Court, C-34/21: a near-identical Hessian rule appears only to repeat the GDPR; such rules are set aside unless they are a valid legal basis.

2025

Federal Labour Court, 8 AZR 209/21: § 26(1) sentence 1 BDSG lacks the measures of Article 88(2) and remains unapplied.

What applies instead is the GDPR itself: a legal basis under Article 6 and the principles of Article 5. In the same case, testing new HR software with real staff data could rest on the employer's legitimate interests, but only if dummy data would not do. Consent rarely helps: employees are seldom free to give or refuse it (Article 29 Working Party).

OUR READING

Without a specific law, the general test applies: a clear purpose, real necessity, the lighter option first.

Sources: European Parliament and Council of the European Union, Official Journal L 119, 2016; Court of Justice of the European Union, First Chamber, 2023; Bundesarbeitsgericht (Federal Labour Court, Germany), Eighth Senate, 2025; Article 29 Data Protection Working Party, 2017

§ 26 BDSG is still in the statute book. The 2025 case concerned an HR system, not monitoring. This page describes the law; it gives no legal advice.

HOW IT IS MEASURED

Two criteria, one assessment

Article 35 of the GDPR requires a data protection impact assessment (DPIA) before processing likely to result in a high risk. The Article 29 Working Party's guidelines list nine criteria; in most cases two are enough. Their own example, a company systematically monitoring its employees' work stations and internet use, meets two: systematic monitoring and vulnerable data subjects.

01
Description
what is processed, why, and the interest pursued

02
Necessity
necessity and proportionality in relation to the purpose

03
Risks
to the rights and freedoms of the people concerned

04
Measures
safeguards and security that address those risks

HYPOTHETICAL EXAMPLE, A SUPPORT TEAM WORKING FROM HOME

Proposal	a screenshot every ten minutes
Criteria	systematic monitoring, employees: DPIA
Lighter option	ticket counts the system already keeps

The DPIA is where the lighter option is written down before the heavier one starts. An invented case.

Sources: European Parliament and Council of the European Union, Official Journal L 119, 2016; Article 29 Data Protection Working Party; endorsed by the EDPB, 25 May 2018, 2017

The four cards are the minimum content set by Article 35(7). The WP29 guidelines of 2017 were endorsed by the EDPB in 2018.

TOOL OF THE ISSUE

The card for one monitoring measure

One card per measure, filled in before it starts and kept with the records. If a line stays empty, the measure is not ready.

01	**Measure and purpose**	what is recorded, about whom, and the problem it solves
02	**Legal basis**	Article 6 GDPR; consent only if people can freely refuse
03	**Necessity and the lighter option**	what would prevent the problem without watching anyone
04	**Who was told, and how**	in advance and in writing; in Germany, the works council (§ 87 BetrVG)
05	**Access and retention**	who sees the results; when they are deleted
06	**DPIA needed?**	two of the nine criteria? Systematic monitoring of staff usually means yes

Sources: European Court of Human Rights, Grand Chamber, 2017; European Parliament and Council of the European Union, Official Journal L 119, 2016; Article 29 Data Protection Working Party, 2017; Article 29 Data Protection Working Party; endorsed by the EDPB, 25 May 2018, 2017; Federal Republic of Germany, Bundesgesetzblatt I p. 2518, 2001

The card is the editors' proposal, drawn from Bărbulescu, GDPR Articles 5, 6 and 35, the WP29 texts and § 87(1) no. 6 BetrVG. The diagnostic asks why a number turned red before anyone asks whom to watch. Not legal advice.

EDITORIAL METHOD

Each figure was checked for its year, its publisher and what it measures, in the full text where it could be opened. A source read only in a summary, an abstract or excerpts is marked "via". A figure not confirmed in what was read is marked so on its page, or left out. The editor's interpretation is marked "Our reading".

MANAGEMENT REVIEW

Management without theatre.
