OPERATIONS

WHEN THE LOAD RISES

Pressure often exposes problems that were already there: the peak season in figures, new people and long shifts in the research, answers from the floor, and a handover for five fields.

750 m parcel and express shipments were expected in Germany in November and December 2025 alone.

NO. 02 · OPERATIONS

In this issue

November opens the busiest season in logistics: more volume, less time and more new people, all at once. This issue asks what happens to a standard when the load rises, and what a manager can do before it does.

In 2025 about 4.37 billion parcel and express shipments were moved in Germany; for November and December alone the industry expected about 750 million, up to 21 million on the busiest days. The extra capacity is mostly new people, and the research is clear about their first month: more than four times the risk of an injury. Long shifts add their own. Stiven Janaqi answers from the floor, and a shift handover with five fields closes the issue.

HOW TO READ THIS ISSUE

Figure
Every figure has its source and year at the foot of its page.

Our reading
Where the editor interprets rather than the research, it says so.

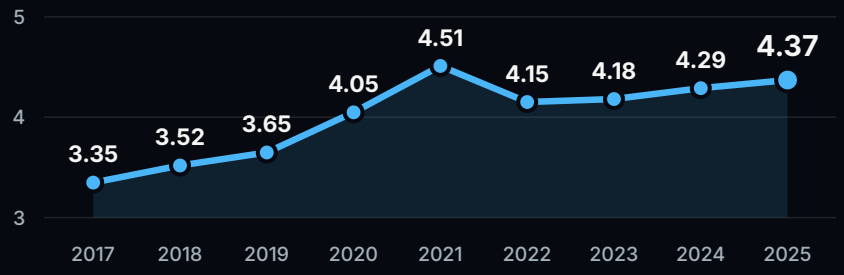

Practice
The steps and the card are proposals to try, not research results.

TREND OF THE MONTH

Peak season

In 2025 about 4.37 billion courier, express and parcel shipments were moved in Germany, 1.8% more than a year earlier. The market is half as large again as in 2015, but since the peak of 2021 it has grown slowly.

PARCEL AND EXPRESS SHIPMENTS IN GERMANY, BILLIONS

On an average delivery day of 2025 the companies moved 14.5 million shipments. For November and December the industry association BPEX expected about 750 million, 1 to 2% more than a year earlier: in its own words, in fact a stagnation.

OUR READING

Over the year the market grows slowly. The peak is another matter: every November the same network has to carry more in less time.

Sources: KE-CONSULT for BPEX, 2026; BPEX, 2025

Shipments for 2015–2025 as the KEP-Studie 2026 gives them (2023: 4.175 billion, rounded). The 750 million are a forecast made in November 2025.

THE NUMBERS

Two months of their own

In the high phase before Christmas the networks move about 15 million shipments a day, and up to 21 million on the busiest days. To carry them, the industry adds people and vehicles.

SHIPMENTS A DAY IN GERMANY, MILLIONS

20,000
extra workers for the season

17,000
extra vehicles

157
occupations short of skilled workers in Germany in 2025

OUR READING

The extra capacity of the peak is mostly people who were not there in October, in a market where people are hard to find.

Sources: KE-CONSULT for BPEX, 2026; BPEX, 2025; Bundesagentur für Arbeit, 2026

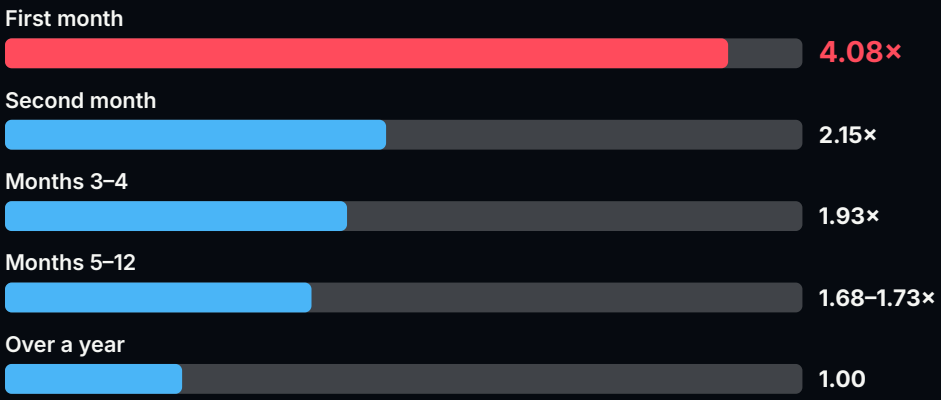

Up to 21 million is the BPEX's calculated figure for the busiest days. Truck drivers are among the 157 shortage occupations, out of 1,236 assessed.

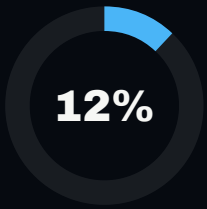

WHAT THE RESEARCH SAYS

The first month

Breslin and Smith set 61,404 first lost-time injury claims of a year in Ontario against how long each worker had been in the job.

RISK OF A LOST-TIME INJURY BY TIME IN THE JOB, AGAINST OVER A YEAR (2006)

of US employees strongly agreed that their organisation does a great job of onboarding new employees.

OUR READING

The riskiest weeks of a job are its first ones, and the peak brings the most first weeks at once.

Sources: Breslin & Smith, 2006; Gallup, 2017

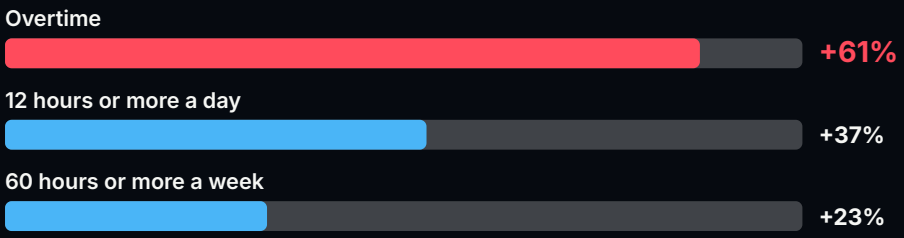

Rate ratios adjusted for sex, age, occupation and industry, Ontario 2000. Read in the full text.

WHAT THE RESEARCH SAYS

The long shift

At the peak the hours grow too. Dembe and colleagues followed more than 10,000 American workers from 1987 to 2000 and compared the jobs in which they were injured.

HIGHER INJURY HAZARD THAN IN JOBS WITHOUT IT (2005)

RELATIVE RISK OF INJURY BY LENGTH OF SHIFT, AGAINST 8 HOURS (2005)

OUR READING

Overtime handles today's volume and adds to today's risk. At best it is a bridge to a plan.

Sources: Dembe et al., 2005; Folkard, Lombardi & Tucker, 2005

Dembe: hazard ratios adjusted for age, sex, occupation, industry and region. Folkard: estimates pooled from four studies of risk by hour on shift. Both read in the full text.

FROM THE FLOOR

Days above forecast

Stiven Janaqi has been a Team Leader and an Area Manager in last-mile logistics and works today as a Night Auditor in hospitality.

What happens to an operation when the load rises?

The peak does not always create the problems. Often it only makes them visible.

When volume rises, an unclear SOP becomes a mistake. Incomplete training becomes a delay or a quality problem. Weak communication becomes the next shift's problem. Capacity that looked enough on a normal day starts to show its limits.

What have you seen on days when demand ran above forecast?

I have had days when demand ran above forecast. Drivers had to be brought in at short notice, and there were drivers in ramp-up who were not yet fully aligned with the SOPs.

On such a day the damage rate went above target, with several concrete cases of damage during the operation. For me that is the clearest proof that operational pressure shows up directly in quality. New people under pressure expose the weakness of standardisation straight away.

What would you do differently today?

Today I would invest more before the load than during it. Once the pressure has started, the time to learn the process becomes much more expensive.

Capacity is not only a number of people. It is the number of people who can carry out the process to standard.

STIVEN JANAQI

A QUESTION FOR YOU

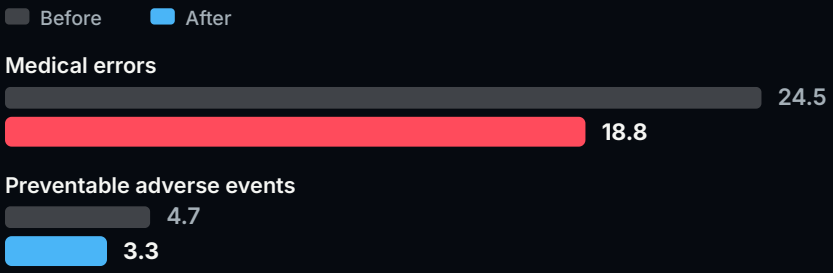

If your volume rose by a third tomorrow, which standard would break first?

TOOL OF THE MONTH

The shift handover

When volume rises, personal memory becomes less reliable; the handover becomes the memory of the operation. In nine hospitals a structured handover cut medical errors by almost a quarter, without making handovers longer.

PER 100 ADMISSIONS, BEFORE AND AFTER THE I-PASS HANDOVER (2014)

FIVE FIELDS UNDER PRESSURE

01	**What changed**	volume, people, equipment, against the plan
02	**What remains open**	each issue in one line
03	**Who owns it**	one name per issue
04	**By when**	a time, not “soon”
05	**What the next shift must know**	heads-ups, safety, new people on the team

Source: Starmer et al., 2014 (via Abstract at PubMed)

Resident handovers in nine children's hospitals, 10,740 admissions; oral handovers took 2.4 and 2.5 minutes per patient. The five fields come from Stiven Janaqi's answers for this issue; the notes under them are the editors'.

EDITORIAL METHOD

Each figure was checked for its year, its publisher and what it measures, in the full text where it could be opened. A source read only in a summary, an abstract or excerpts is marked “via”. A figure not confirmed in what was read is marked so on its page, or left out. The editor's interpretation is marked “Our reading”.
